

CHIPUKA HISTORY

CHIPUKA WEBSITE PROJECT SCENARIO

Project Overview

We are based in Arusha, Tanzania, supporting projects across northern Tanzania and corridor landscapes. We also operate scenic flights to Amboseli, Lake Natron, and Arusha, connecting travelers and learners to the ecosystems they help protect.

Mission

“To advance conservation and sustainable development through aviation, innovation, and education—protecting Africa’s landscapes while building knowledge and capacity among the people who call it home.”

Vision

“To protect landscapes and environments today through knowledge, innovation, and modern technologies—fostering the same love and connection we hold, so future generations can sustain and build on this work.”

The Chipuka website project aims to establish a modern digital platform that represents the organization's mission, programs, impact, and resources. The website will serve as the primary source of information for stakeholders, partners, beneficiaries, and the public while providing an easy content management experience for the Chipuka team.

1- FROM ZANDER @2026 AFTER THE WEBSITE REVIEW

I spent some time reviewing the current website and thinking through the structure. The concept is good, but the site needs to guide visitors more clearly because we essentially serve three completely different types of clients.

Our motto is ***Sky, Soil, Sustainability***, which represents the three pillars of what we do.

The idea behind Chipuka is supporting conservation, land management and human development through aviation, technology and training. These three areas are connected in the work we do across conservation, agriculture and education.

Because of that, the website should be structured around three clear divisions that reflect these areas.

Aviation Services

Agricultural Services

Educational and Development Services

The homepage should introduce the mission briefly and then immediately give visitors three clear entry points so they can go straight to the service relevant to them.

For example:

Aviation Services

Scenic flights, conservation patrols and aerial surveys

Button: Explore Aviation

Agricultural Services

Drone spraying, crop monitoring and agricultural consulting

Button: Explore Agriculture

Educational and Development Services

Psychotherapy, assessments and professional training

Button: Explore Education

Each of these should then lead to its own page.

Each division page should follow the same structure so the site feels consistent:

Short introduction to the division

Three core services

Capability section (fleet or expertise)

Partners relevant to that division

Booking or enquiry

For ***Aviation*** the services should be:

Conservation Patrols & Wildlife Monitoring

Aerial Photography & Scenic Flights

Emergency Response & Humanitarian Support

Below that we show the aircraft fleet and then partners. There should also be a clear ***Book Scenic Flight*** option since that will likely be the most common online booking. As we discussed earlier, this would ideally use a calendar style booking system, so we would need to explore how that could be integrated on the website.

For ***Agriculture*** the services should be:

Agricultural Management Consulting

Agricultural Drone Services

Crop Monitoring, Mapping & Aerial Surveying

Below that we show the drone fleet and then partners. Drone services could potentially use a similar booking approach as scenic flights, or alternatively a request / quote form depending on what works best.

For ***Education*** the services should be:

Psychotherapy

Educational & Pre-Hiring Assessments

Capacity Building, Training & Workshops

Below that we show partners and the booking options. The education, psychotherapy and training services already have an existing booking system, so ideally we can simply link the website directly to that system.

The goal is not to rebuild everything but to reorganize the site so visitors immediately understand the company mission, find the service relevant to them, and easily make a booking or enquiry.

BELOW IS CURRENT SITE STRUCTURE BEFORE THE ABOVE AMENDMENT FROM ZANDER - WHAT ZANDER SPEAK FOR - THAT NEEDS ADJUSTMENT AND GUIDE PROPERLY VISITORS

Project Background

The project started @2023 after i release the Plan see the Github Repository (https://github.com/onemarketingagencytz-OMA/CHIPUKA/tree/main/01_PLAN%402023) Use the data to develop later the Platform History. with the development of an initial website structure based on the information and requirements provided by the client (https://github.com/onemarketingagencytz-OMA/CHIPUKA/tree/main/05_CHIPUKA_WEBSITE_CONTENT).

During development, several discussions led to changes since 2023 up to May 2026 in the site's structure, content organization, and usability. These improvements required restructuring parts of the website instead of simply completing the original version.

As a result, the project timeline shifted. While technical development continued, communication became spread across WhatsApp conversations , making it difficult for everyone to track the latest decisions, revisions, and outstanding tasks.

Current Status

i I need to rework , rebuild a complete Saas new website Platform with few Webpages , Client Dashboard for the Project Management , Also The Project directions

The current version should be treated as a working draft rather than the final product. It contains the core structure and ideas that have been gathered throughout the project. (See the attachment files)

This version provides the foundation for the final implementation.

Project Challenges

The main challenges identified include:

- * Multiple structural revisions.
- Continuous refinement of page layouts.
- Changing content requirements.
- Feedback shared through different communication channels.
- No centralized review and approval process.
- Delays caused by repeated revisions and coordination.

Project Revamp

To complete the project efficiently, the workflow will be reorganized.

Beginning on the 4th, a centralized project workspace will be introduced.

The workspace will include:

* Live website preview. • Complete project presentation. • Website structure. • Page-by-page progress. • Pending tasks. • Client feedback section. • Requested revisions. • Approval stages. • Future updates. • Administrator documentation.

This workspace will become the official communication point for the remainder of the project.

Project Workflow

Phase 1 Project review and presentation.

The client reviews the complete website structure and project documentation.

Phase 2 Feedback collection.

All comments, corrections, and additional requirements are submitted through the project platform.

Phase 3 Implementation.

All approved revisions are implemented according to priority.

Phase 4 Quality assurance.

Testing of pages, responsiveness, forms, links, media, and overall performance.

Phase 5 Final approval.

The client reviews the completed website and confirms readiness for launch.

Phase 6 Project handover.

The client receives:

* Administrator account. • Content editing privileges. • Documentation. • Basic website training. • Website ownership.

Communication Policy

From the revamp date onward, all communication regarding website revisions, approvals, new requests, and progress updates will take place through the centralized project platform. And use this Github repository as source of information

(<https://github.com/onemarketingagencytz-OMA/CHIPUKA/tree/main>)

This ensures every stakeholder has access to the same information, eliminates duplicated discussions, and provides a clear record of every decision made throughout the project.

Expected Outcome

At the end of the project, Chipuka will have:

* A fully functional and professionally designed website. • A modern content management system. • Administrator access for internal management. • A structured platform for future updates. • A scalable digital presence that supports the organization's long-term goals.

This project approach provides a clear path toward completion while improving communication, accountability, transparency, and overall project management for both the development team and the Chipuka team.

NOW WHAT I NEED FROM YOU CHATGPT .

1- Lets deep analysis of the above scenario and confirm your clear understanding of the Chipuka Project Case and get Time to analyze .

2- Read the client's review, analyze it and find the proper plan to accomplish this project. Lets keep the current Webpages , Just lets structure it properly

3- Kindly use the Github resource (<https://github.com/onemarketingagencytz-OMA/CHIPUKA/tree/main>), analysis it and confirm you understanding it and this should be used or shared to BASE44 for development of Chipuka Platform

4- I need a simple platform that can show (A fully functional and professionally designed website. • A modern content management system. • Administrator access for internal management. • A structured platform for future updates. • A scalable digital presence that supports the organization's long-term goals., Also i need platform that can questions the what chipuka can achieve or need to achieve for online Platforms , Social media Plan and Strategies and so much more that you should help me to refine this idea more better

5- Help me to break this project into how many implementation prompts will be needed .

6- The Chipuka Team of Directors are 4 and each one has its own interest. Lets develop a questioner step by step that will later help each director to build its own department - this should be more simple.

6- NOW HELP ME ON YOUR DEEP THINKING AND UNDERSTANDING ,LETS GIVE ME A DEEP STRATEGIES ON HOW TO IMPLEMENT THIS PROJECT. I WILL USE BASE44

KYARA- FROM OMA
